About Endpoint Antivirus. Endpoint Antivirus provides a next generation protection solution designed to protect your network devices from threats and intrusions. Endpoint Antivirus detects, analyzes, protects against and blocks known and unknown threats from: network attacks (including worms, trojans, viruses, spyware, and others) zero-day threats (e.g., Trojans, viruses, worms, spyware, and others) content-based threats (e.g., spyware, malware, spam, P2P threats, etc.) Private data leakage malicious code (e.g., Trojans, viruses, and others) object-based attacks (e.g., backdoor, rootkit, etc.) Configuration Assistant (EA Config Assistant): Configure different Protection Policies, Rules and Alerts. Packets List: Display the number of network packets that the device was able to identify during the scan. This statistic provides a first look at how efficient the device was able to detect malware during the scan. Domain Security: Scan and block malicious domains detected in the device. Network

---

Security: Scan and block malicious traffic. Microsoft Updates: Download and install the latest version of Microsoft Windows Updates. Uninstall. Start the Endpoint Antivirus program. Select Options, select the Components tab, and select the Uninstall button. In the Uninstall dialog box, select any unwanted components or features that you want to remove, and then click OK. C:\Program Files\Endpoint Antivirus\unins000.exe /s About ESET NOD32 Antivirus. ESET NOD32 Antivirus provides a next generation protection solution designed to protect your home, office or enterprise network devices from threats and intrusions.

ESET NOD32 is the powerful, award-winning antivirus software that uses a holistic approach to detect and block malware.
